

Beyond expectations

The Air Drain exposes air bricks and reduces the effects of dampness, mould growth and heat loss which other commonly known drainage systems cannot provide.

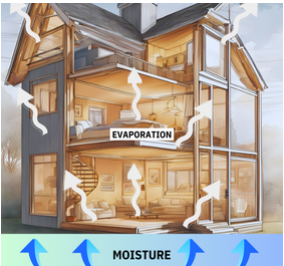

Help prevent black mould

No blocked air bricks

Avoid water damage

Allow natural ventilation

The support we provide

In house expertise

Our skilled team of surveyors and estimators are ready to assist you, ensuring your Air Drain project proceeds smoothly

Made to measure solutions

Every home has different needs, that's why our Air Drain product is available in made to measure lengths based on the home in various lengths, sections & finishes.

Surveys & Installation

Our team of experienced surveyors and installers will inspect your home, design and install your Air Drain system as required.

AIR DRAIN

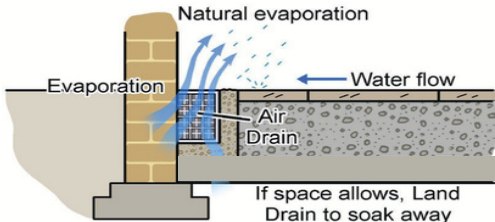

Unique method of reducing dampness, mould & ground gasses.

How the **Air Drain** works

Pre Air Drain install

Post Air Drain install

Science has shown the importance of living in a healthy environment, from understanding VOCs, dampness, mould, and ground gases to the impact of climate change on homes. Over the decades, this knowledge has improved our health and longevity. The industry has developed breathable materials, heating systems, and other innovations to keep us comfortable. However, what we know doesn't work is when external ground levels are close to, at, or above internal floor levels, which weren't designed to prevent moisture ingress.

PCA innovation awards

→ Non-invasive

The installation of the Air Drain is non-invasive to the existing structure, and no other product on the market serves this specific purpose, which is why it is patented.

→ Trusted brand

Eco Tiffin, the creators of the Air Drain system, has earned a reputation as a leading eco-friendly building service, providing a complete 'one-stop-shop' service, from initial surveys to full retrofitting.

→ Reduce Cold Bridging

Established methods exist to address most cold bridging issues in properties, but no natural solution for preventing dampness and cold bridging at the floor-to-wall junction was available until the Air Drain was developed.
